PRODUCT

Major capabilities built

City-specific publishing

City onboarding, local branding, tenant routing, and administrative access.

Event discovery & curation

Automated source discovery, URL imports, categories, featured events, and editorial tools.

Newsletter operations

Subscriber management, curated digests, previews, and controlled email sending.

Maps & local discovery

Venue geocoding, event pins, distance sorting, and radius filters.

Attendance & sharing

RSVP and carpool workflows, calendar links, and SMS event sharing.

Community & localization

Gamification and bilingual Tokyo experiences.

AustinCares · Local deals

[austincares.eventcarpooling.com](#)

Curated offers, community-submitted deals, and map-based discovery.

CONNECTED SERVICES

Key integrations

OpenAI · Replit AI Integrations

AI-assisted event extraction and translation.

Gmail · SMTP + IMAP

Newsletter delivery and inbox-based event ingestion.

Twilio

SMS sharing through the “Tell a Friend” workflow.

Ticketmaster + Eventbrite

Event discovery and event-page imports.

OpenStreetMap / Nominatim

Venue geocoding; Photon supports Japanese venue lookups.

PostgreSQL

Persistent platform, digest, and subscriber data.

Additional supported event sources: Luma, Meetup, Bandsintown, Songkick, Station Austin, and ATLTech.events. Adapter support does not mean every source is configured or currently healthy.

SOURCES & COUNTING NOTES

- Built functionality:** project-task history, not a strict count of independent features. Completed but unmerged work is not live; capability availability varies by city.
- Code:** tracked events frontend, API server, and database-library source, including tests, comments, and blanks. Excludes portfolio, mockup sandbox, assets, skills, lockfiles, and unrelated workspace files.
- Publishing:** main-history commits titled “Published your App,” not verified successful deployments. The definitive republish count requires Replit Publishing → History.
- Newsletters:** retained production digests with a send timestamp; drafts and test-email previews excluded. Available records, not a reconstructed lifetime sending history.
