PUBLIC-PAGE REBUILD · LIVE

Rebuilt to make public pages AI-readable

The public service delivers **server-readable HTML** for platform, city, digest, event, venue, and About pages. Direct answers, FAQs, canonical links, robots files, and XML sitemaps support discovery; JavaScript powers interactive features.

Verified: live homepage text is accessible in ordinary HTTP requests and requests with ClaudeBot/GPTBot headers. Event structured data requires verified dates and venue details; not all listings qualify. Readable HTML does not guarantee indexing or AI citations.

HUMAN-REVIEWED AI ASSISTANCE · LIVE

Meet Spock Assistant

Our behind-the-scenes robot assistant helps the team **research local events, organize city guides, and draft weekly newsletters. Humans review every city request and approve what gets published.**

A team helper—not a public chatbot, automatic city approver, or guarantee of complete event coverage.

PRODUCT

Major capabilities built

City-specific publishing

Local branding, tenant isolation, and authorized administration. Two-field city requests are reviewed manually, with requester acknowledgement emails; no instant city launch.

Event discovery & curation

Source adapters, URL imports, categories, featured events, and editorial digest tools.

Newsletter operations

Subscriptions, curated editions, previews, and controlled subscriber email delivery.

Maps & nearby discovery

Venue geocoding, map pins, distance sorting, and radius filters.

Participation & sharing

RSVP, calendar, SMS sharing, and personalized attendance/carpool-interest tools where enabled. No booked or guaranteed rides.

Community & localization

Gamification and bilingual Tokyo experiences; availability varies by city.

AustinCares · Local deals

[austincares.eventcarpooling.com](#)
Curated offers, community-submitted deals, and map-based discovery.

CONNECTED SERVICES

Key integrations & supported sources

OpenAI · Replit AI Integrations

AI-assisted extraction and Japanese translation; Spock represents the team's research and drafting assistance.

Gmail · SMTP + IMAP

Newsletter delivery and inbox-based event ingestion.

Twilio

SMS event sharing through the “Tell a Friend” workflow.

Ticketmaster + Eventbrite

Discovery adapters and event-page imports.

OpenStreetMap / Nominatim

Venue geocoding; Photon supports Japanese venue lookup.

PostgreSQL

Persistent platform, event digest, and subscriber records.

Additional supported sources:

Luma, Meetup, Bandsintown, Songkick, Station Austin, and ATLTech.events. Adapter support does not prove each source is configured or currently healthy.
